

Angola

General Information (2008):
 Population (x1000): 18.021;
 Urban Population: 57%
 Under five Mortality: 220 per 1000
 Population living below US\$ 1.25/day: 54%

Sanitation and Drinking Water Country Profile

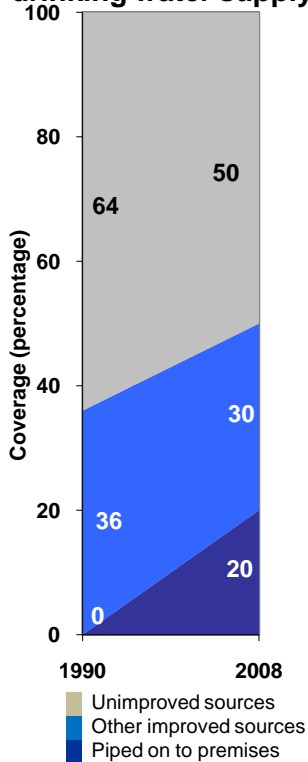

DRAFT
 For Discussion

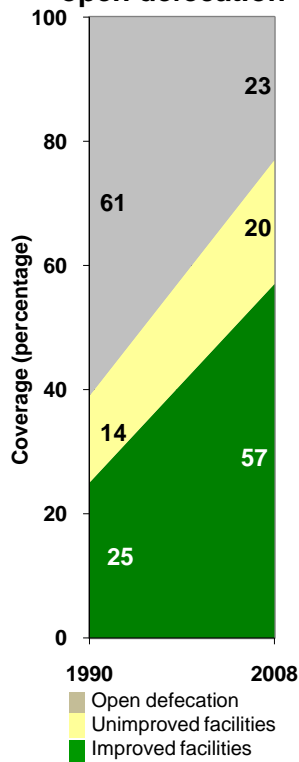

- Angola is off-track to achieve the MDG drinking water target
- Angola is on-track to achieve the MDG sanitation target

COVERAGE STATUS AND TRENDS

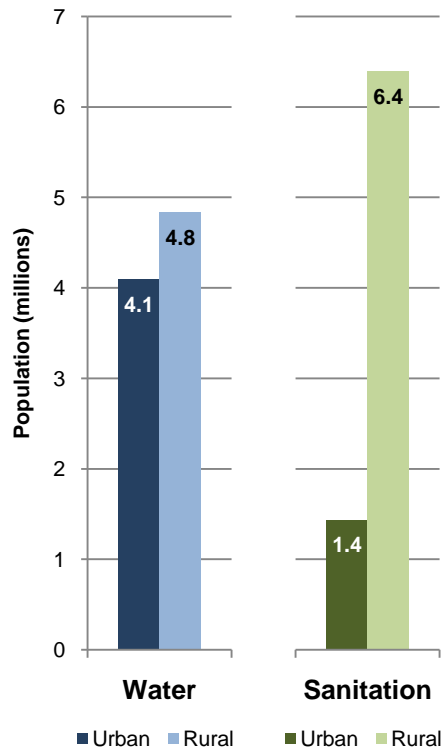

Half of the population has access to improved drinking water supply

23% of the population practice open defecation

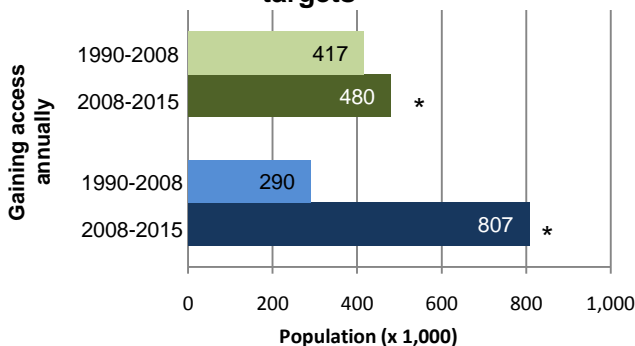

The majority of the unserved are in rural areas

SCORECARD ON BUILDING BLOCKS FOR SERVICE DELIVERY

The country status overview scorecard is a performance management tool assessing whether sector and subsector service delivery operations are aligned with intended sector outcomes. The service delivery pathways set out a sequence of building blocks. Together these building blocks are a hypothesis of what the most important cause and effect relationships in a sub-sector program are. The Scorecard benchmarks the country service delivery pathways which turn money into water and sanitation services in each of four subsectors.

DRIVERS AND BARRIERS

Drivers of Progress

- Investment program for sanitation (urban only) and drinking water (urban and rural) operationalized

Barriers to Meeting the MDGs

- Insufficient financial flows for sanitation to meet the MDG target, especially in rural areas
- No criteria for equitable distribution of funding to unserved and poor populations in the sanitation and the drinking water sector existing or applied
- No policy existing for sanitation and policy on drinking water not yet gazetted
